

ArexAi

WHITEPAPER / VERSION 1.1

Intelligence, with context.

AI data analysis platform and ARXAI token architecture

DOCUMENT STATUS

Early Access Beta

Working paper - Updated 20 September 2026

SECTION 00

Document guide

This working paper separates live product capabilities from planned token utility and future delivery milestones. Readers should verify all on-chain information independently.

01	Executive summary	Purpose, product status and design principles
02	Product architecture	How ArexAi turns files into reviewable insight
03	ARXAI utility	Planned roles inside the product economy
04	Token and presale model	Supply, allocation, rounds and burn rules
05	Roadmap	Beta development, sale stages and market readiness
06	Contracts and controls	BNB Smart Chain addresses and release controls
07	Risks and disclosures	Material limitations and verification boundary

BSC NETWORK	1B FIXED SUPPLY	75M PRESALE	Beta PRODUCT STAGE
-----------------------	---------------------------	-----------------------	------------------------------

SECTION 01

Executive summary

ArexAi is an AI analysis and data platform available in Early Access Beta. It is designed to organize fragmented information, preserve source context and help users move from raw Excel or CSV data to reviewable insight.

The current application supports natural-language analysis, local evidence checks, multi-sheet workbook inspection and approval-gated workbook redesign. ARXAI is planned as the platform utility layer. Proposed roles remain subject to product validation, technical security and applicable regulation.

Excel + CSV SUPPORTED FILES	Local first DATA BOUNDARY	Approval WORKBOOK CHANGES
---------------------------------------	-------------------------------------	-------------------------------------

Design principles

- Keep AI output connected to the evidence that produced it.
- Ask for clarification instead of inventing workbook context.
- Require explicit approval before formulas or structural changes are added.
- Treat analysis as decision support, not guaranteed truth or financial advice.

Current product boundary

ArexAi is in Early Access Beta. Features, model behavior, data limits and delivery timelines may change through testing, security review and user feedback.

SECTION 02

Product architecture

The product follows a four-stage intelligence loop intended to reduce information loss while keeping the user in control of interpretation.

01 Connect

Bring Excel and CSV sources into a traceable browser workspace.

02 Interpret

Use conversational analysis to surface trends, comparisons and anomalies.

03 Validate

Cross-check supported claims against browser-local calculations and visible evidence.

04 Act

Create reviewed summaries, charts and a separate redesigned workbook copy.

Privacy and control

Workbook rows stay in the browser for local analysis and file generation. AI requests use a minimized analytical summary rather than raw rows. The original workbook is not overwritten; approved changes are delivered as a separate downloadable file.

Professional workbook actions can include recommended KPI formulas, an executive report sheet, category-based summary tables, charts and period comparisons. New formulas require separate user approval.

SECTION 03

Planned ARXAI utility

ARXAI is intended to operate inside the product economy rather than represent a promise of passive return.

Platform access

Proposed access to selected premium analytical workflows and advanced report generation.

Usage accounting

A proposed credit layer for data processing, model usage and compute-intensive analysis.

Ecosystem incentives

Potential incentives for measurable integrations, templates and useful contributions.

Governance research

Future participation mechanisms may be evaluated only after product, security and legal review.

No guaranteed return

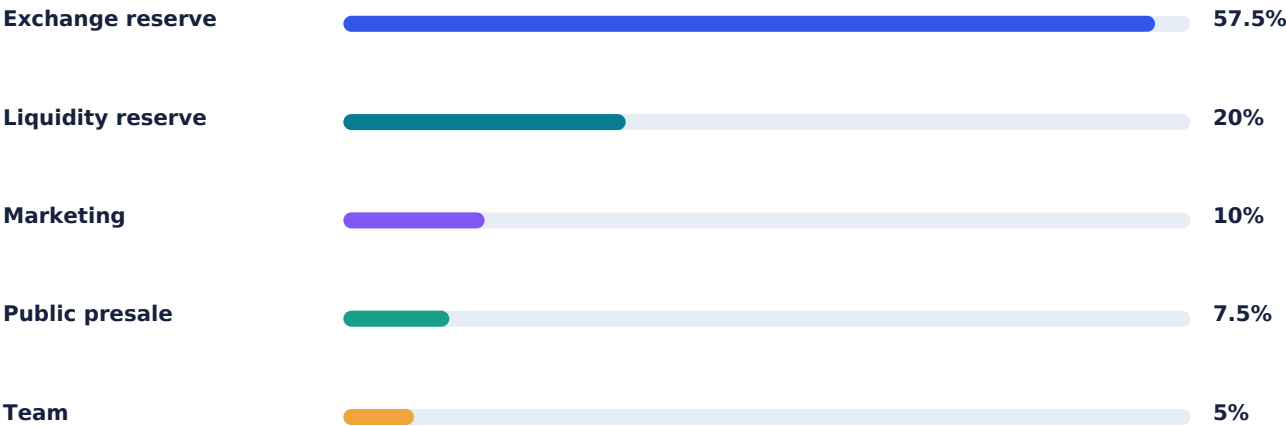

ARXAI does not grant a guaranteed yield, fixed appreciation, exchange listing or ownership interest in ArexAi. Utility assumptions may be revised as the product and regulatory environment develop.

SECTION 04

Token and presale model

1,000,000,000 FIXED ARXAI SUPPLY	0 POST-DEPLOYMENT MINT	BNB SMART CHAIN
--	----------------------------------	---------------------------

Token allocation

Allocation	ARXAI	Share	Control
Exchange reserve	575,000,000	57.5%	20 fixed tranches of 28.75M
Liquidity reserve	200,000,000	20.0%	Planned six-month lock
Marketing	100,000,000	10.0%	Operational allocation
Public presale	75,000,000	7.5%	50M Round 1 + 25M Round 2
Team	50,000,000	5.0%	Six-month cliff, then 20 releases

SECTION 04A

Presale rounds

Two independent public sale contracts allocate 75 million ARXAI. Purchased tokens are delivered to the connected BNB Smart Chain wallet after confirmation.

Round 1

50,000,000 ARXAI at \$0.01 per token. 18 September - 18 October 2026. Maximum funding target: \$500,000 for product development.

Round 2

25,000,000 ARXAI at \$0.02 per token. 23 October - 22 November 2026. Maximum funding target: \$500,000 for liquidity and listing readiness.

Participation parameters

- Minimum purchase: 100 USDT equivalent.
- Maximum purchase: 30,000 USDT equivalent per wallet and round.
- Supported website payment routes: USDT, USDC and BNB on BNB Smart Chain.
- Every wallet approval and transaction remains visible in the buyer's own wallet.

Independent burn rule

Unsold tokens are intended to be burned after each round. A round's remainder is not carried into the following sale. Burn execution and transaction hashes should be verified on-chain.

SECTION 05

Roadmap

Dates and milestones describe the current working plan. Delivery order may change in response to security, product quality and regulatory requirements.

NOW	Early Access Beta	Conversational Excel and CSV analysis, evidence validation and approval-gated workbook redesign.
18 SEP - 18 OCT	Round 1	50M ARXAI at \$0.01. Proceeds are intended for product and contract development.
PRODUCT DELIVERY	Beta expansion	Broader report workflows, stronger workbook intelligence and independent security work.
23 OCT - 22 NOV	Round 2	25M ARXAI at \$0.02. Proceeds are intended for liquidity and listing readiness.
MARKET READINESS	Liquidity and staged DEX rollout	Create and lock eligible liquidity positions, then pursue third-party market availability.

SECTION 06

Contracts and release controls

All official addresses below are BNB Smart Chain addresses. Users should verify the domain, chain and contract before signing any transaction.

ARXAI token	0xeaa12b3be7cdec7749b972ed5c342f4e933ccbb3
Round 1 presale	0x52c880e4d54a5dd3ca7dd185d44715017b25dee0
Round 2 presale	0x0709b5f668280f54b48b953c3d2bd7e137e43398
Team vesting	0x2d607fdb0da6407c29c2d4bdafab2e1479eb5ee2
Exchange reserve	0x6af332c903c8f3fde0e620b360247c28476a2180
Liquidity reserve	0xc141a3f0c90f3fa3b5f55fac6683715a14835e42

Control summary

- The ARXAI token has a fixed supply and no post-deployment mint function.
- Team allocation uses a six-month cliff followed by 20 monthly releases of 2.5M ARXAI.
- The exchange reserve is divided into 20 fixed tranches of 28.75M ARXAI; release is staged and owner-authorized.
- Liquidity positions created from the reserve are planned to be locked for six months.
- Contract verification and security reports are published at arexaidata.com/security.

SECTION 07

Risks and disclosures

Product risk

Early Access software can contain errors, unavailable features or inaccurate output. Users must review important findings.

Smart-contract risk

Code defects, wallet behavior, network congestion and third-party dependencies can cause loss or failed transactions.

Market and liquidity risk

ARXAI may be volatile or illiquid. A planned liquidity position or application does not guarantee a market.

Regulatory risk

Laws, restrictions, tax treatment and eligibility can change across jurisdictions.

Listing risk

No centralized or decentralized exchange listing is guaranteed. Listings are controlled by third parties and market conditions.

Team and execution risk

ArexAi is developed by an anonymous core team. Anonymity is not a substitute for verifiable contracts, milestones and treasury activity.

This document is informational only. It is not investment, financial, legal or tax advice; it is not an offer where an offer would be unlawful. Prospective participants should conduct independent research, verify all contract addresses and obtain professional advice where appropriate.

SECTION 08

Verification and contact

Use only the official ArexAi domain and independently verify on-chain data before interacting with any contract.

Verification rule

ArexAi never asks for a seed phrase or private key. Verify that the wallet is connected to BNB Smart Chain (Chain ID 56), confirm the contract address and review every approval before signing.
